

The Product Tracker

One new product at a time. Five-day gaps. Zero guessing.

Why this worksheet exists

Almost every “my skin reacted” story has the same root cause: **three new products in two weeks**, then no idea which one broke the barrier.

This tracker enforces the only method that works:

One new product. Five-day gap. Log the result. Then “ and only then “ the next one.

If you keep this tracker honestly for eight weeks, you will know more about your own skin than 99% of people who consume skincare content for years.

How to use it

- Baseline week:** fill in the Baseline Snapshot below (before you change anything).
- Every time you introduce something new “ a PDRN, a moisturizer, a sunscreen “ start a **Trial Block**.
- Run it for **5 days** with nothing else new.
- Score it on day 5. Keep it, pause it, or bin it.
- Wait **at least 2 days** before the next trial.
- Re-run the **Barrier Audit** every 30 days.

Baseline Snapshot

Field	Your entry
Date	
Barrier Audit score (from guide)	/10
Current routine (list every product)	
Estimated product count	
Known triggers (if any)	
Skin type (dry / oily / combo / reactive)	
Main goal (glow / redness / texture / repair)	

The Trial Block (copy one per new product)

Trial Block #__

Field	Entry
Product name	
What it is (serum / mask / moisturizer)	
Does INCI list sodium DNA / PDRN?	yes / no
Fragrance-free?	yes / no
Date started	
Where in routine (step #)	
Frequency (nights/week)	

Day-by-day log

Day Tingle “ Redness “ Dryness “ Breakout “ Notes

- 1
- 2
- 3
- 4
- 5

Day-5 verdict: “ KEEP “ PAUSE “ BIN **Why:** _____

The 8-week trial schedule

Week	Trial	Status
0	Baseline snapshot (no changes)	â~
1	Barrier reset â€” nothing new	â~
2	Trial #1: ceramide moisturizer	â~
3	Trial #2: soothing layer (B5/centella)	â~
4	Trial #3: PDRN serum (2 nights)	â~
5	Ramp PDRN to 3 nights (no new products)	â~
6	Trial #4: optional overnight PDRN mask	â~
7	Trial #5: optional gentle acid (1Ã—/week)	â~
8	Review + Barrier Audit + before/after photos	â~

Product inventory sheet

#	Product	Category	Open date	Expiry	INCI has PDRN?	Verdict	Repurchase?
1		Cleanser			â€”		
2		Toner			â€”		
3		PDRN					
4		Moisturizer			â€”		
5		SPF			â€”		
6		Occlusive			â€”		
7		Soother			â€”		
8		Acid (1Ã—/wk)			â€”		

Expiry note: most opened skincare is best within **6â€”12 months** (sunscreen within **12 months** of opening, often less). Write the open date on the box. Expired actives oxidise and irritate.

Trigger journal

When something goes wrong, capture it here â€” not in your head.

Date **What happened** **What was new** **What I suspect** **Confirmed?**

â€œConfirmedâ€ only gets a yes after youâ€™ve tested the suspect twice, five days apart. Until then itâ€™s a hypothesis.

Monthly Barrier Audit re-check

Month **Date** **Score /10** **Change** **Action**

1				â€”
2				
3				

Interpretation: - Score **rising** â†’ keep going, you can consider adding one active - Score **flat** â†’ hold. Do not add anything new. - Score **falling** â†’ back to Phase 1 Reset. Drop all actives immediately.

The two-minute weekly review

Every Sunday, answer four questions:

- Did I introduce **more than one** new product this week? (should be no)
- Did anything sting, burn, or flush? (log it)
- Am I seeing **change** or just hoping? (check photos, not memory)
- Is my barrier score **8+** enough to keep my current stack? (if not, cut back)

Progress photos â€” do it right

- Same** time of day, **same** light, **same** distance

- No makeup, freshly cleansed, no product
- Weekly, not daily (daily photos show lighting, not skin)
- Store them in one album so you can scrub through

Memory is a liar. Photos are not.
